(54) CAMERA AND CAMERA UNIT USING THE SAME

(57)Abstract:
PROBLEM TO BE SOLVED: To provide a pan tilt camera with small size and less consumption power.
SOLUTION: The camera includes an image pickup device composed of a lens that optically images an object to be photographed, an optical conversion element that converts the image formed by the lens to electric signals, and a signal output section that sends out the optical video signal with a determined form from the optical conversion element to an external device. Furthermore, the camera includes a moving unit that allows the lens and the optical conversion element to be moved.

LEGAL STATUS

[Date of request for examination]
[Date of sending the examiner's decision of rejection]
[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]
[Date of final disposal for application]
[Patent number]
[Date of registration]
[Number of appeal against examiner's decision of rejection]
[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
